Allowable Subject Matter

1. **Claims 7-25** are allowed.
2. **Claims 8-10, 13, 16 and 18-25** will be rejoined, because upon the allowance of a generic claim, applicant is entitled to consideration of claims to additional species, which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
3. The following is an examiner's statement of reasons for allowance: as to **claims 7-16**, patentability resides, at least in part, an electrical switch comprising: an electromagnetism drive mechanism, and a bedplate, a movable bolt connected with the movable contacts, a movable iron core connected with the movable bolt to allow the movable bolt to move based on a movement of the movable iron core, and an electromagnetic holding mechanism disposed on the bedplate to hold the movable and stationary contacts to connect the circuit after the movable and stationary contacts are connected, wherein the holding mechanism has an electromagnetic iron, and one of a pothook or a baffle, wherein when the electromagnetic drive mechanism is powered on, the movable iron core is attracted so that the movable bolt is configured to be driven by the movable iron to move to a position, where the pothook hitches the movable bolt or

the baffle rams the movable bolt, and the movable contacts move to contact with the stationary contacts, and then the electromagnetic iron of the holding mechanism is powered on to cause the pothook or the baffle to be attracted by the electromagnetic iron to further keep the movable and stationary contacts closed.

4. As to **claims 17-25**, patentability resides, at least in part, an elasticity holding mechanism disposed on the bedplate to hold the movable and stationary contacts to connect the circuit after the movable and stationary contacts are connected, wherein the holding mechanism comprises a spring, a stop button, and a reset button in combination, a pothook or a baffle, and wherein the pothook or the baffle abuts against and contacts with the movable bolt by elasticity, wherein when the electromagnetic drive mechanism is powered on, the movable iron core is attracted so that the movable bolt is driven by the movable iron to move to a position, where the pothook hitches the movable bolt or the baffle rams the movable bolt, and the movable contacts move to contact with the stationary contacts, and then the pothook is hitched or the baffle is rammed by the elasticity of the spring to further keep the movable and stationary contacts closed, and the pothook or the baffle is parted from the movable bolt by pressing the stop button.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
